Connecting for the first time

Windows 8 has a new user interface called Metro that is designed for touch-screen computers and handhelds. Because of this, you must move your mouse/trackpad pointer or finger to a corner of the screen for certain things to appear.

To begin configuring your Windows 8 computer for the wireless network, move your pointer to the top or bottom right corner without clicking. The Charms Bar will appear on the right.

From Setting, click the Wi-Fi icon above Notifications. If there are available wireless networks but your computer is not connected to any of them, the Wi-Fi icon will read Available underneath.

Windows will display a list of available wireless networks. Click eduroam. eduroam will become highlighted when it is selected. Click Connect.
Windows may display **Checking network requirements** while it detects the security settings for the wireless network.

Enter your UNE email (UNEusername@une.edu.au for staff and UNEusername@myune.edu.au for students) and UNE password, then click OK.

You will then be prompted to accept the authentication server’s certificate to initiate encryption. This will keep your username and password safe.

To accept the certificate, click the **Connect** button.

Windows may display “Verifying” and “Connecting” while it connects to the network.

After successfully connecting to the wireless network, Windows will display the Wi-Fi networks list with **eduroam** connected.
