

ITD Fact File:

Wireless with Mac OSX

Information Technology Directorate – IT Service Desk

The following instructions are designed to help you connect your computer to the university's wireless network on Mac OS 10.4 or above.

For most users connecting to the wireless network should be a simple process but in some cases a different set up may be required. If you have difficulty connecting to the wireless network after following these instructions – simply contact the IT Service desk.

Changing your password

UNE requires students and staff to have a secure UNE password, as such any user that has not registered their account or reset their password since the 8th Feb 2007, will need to reset their password in order to access UNE's wireless network.

How do I change my password?

Just go to myUNE <http://my.une.edu.au> and click on the account tab, simply follow the instructions to reset your password.

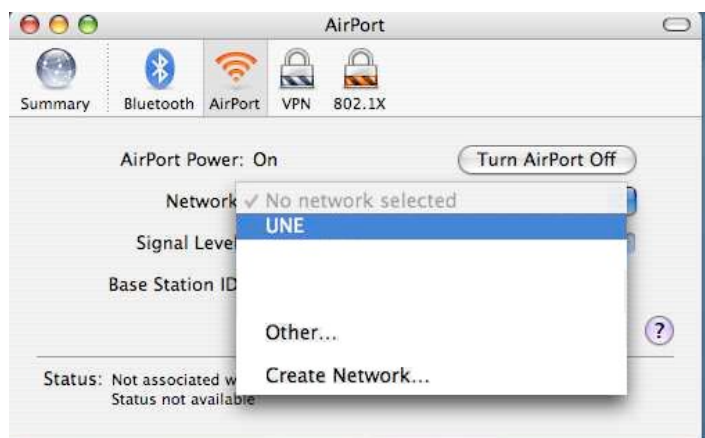

SETUP INSTRUCTIONS:

- Click on the Airport icon  at the top right corner of your screen. Select "Open Internet Connect" from the drop down menu.

- Click on the Airport button at the top of the new window.

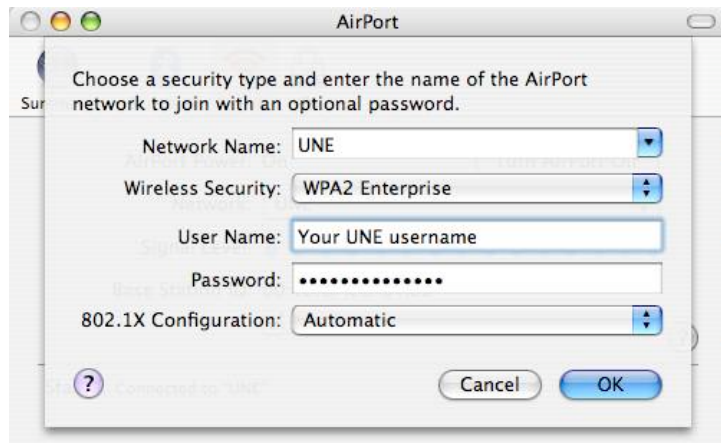

- Select "UNE" from the Network drop down menu.

Fill in all fields as you see them in this picture.

- If WPA2 Enterprise does not appear, WPA will suffice.
- Click OK

This should close your window and your computer will connect to the wireless network.

NOTE: If your password does not work, Please see the information at the top of this document.

If you get prompted to verify a certificate, simply click *continue*

If you have any questions, please contact the IT Service Desk on x5000.
